Leading In Sustainable Wood Biomass

Founded in 2004, Enviva is a leading global energy company specializing in sustainable wood biomass. We are the world’s largest producer of wood pellets, which provide sustainable, low-carbon heat and power, replacing fossil fuels.

At Enviva, we recognize that our future depends on thriving, abundant forests. Forestland is one of America’s greatest natural resources, and we are committed to keeping these forests healthy and growing.

Enviva’s Track & Trace® program is a one-of-a-kind system that makes it possible for Enviva to track every ton of wood we buy back to its origin in the forest or sawmill. Because of this traceability, we have a detailed understanding of the characteristics of the wood we use and the forests we touch, and we can pass this information along to our customers.
VALUES-DRIVEN SOURCING
With Track & Trace, we record the geographic location, age, and forest type for all of our primary wood. We know how and by whom each tract was harvested, as well as the proportion of wood that was sent to Enviva versus other forest products industry consumers.

Between 2011 and 2016, forest inventory in our supply base has increased by more than 150 million tons.

Where does Enviva source its wood?

- more than 1,300 working forest harvests
- nearly 100 counties in 7 southern states

What is the source of Enviva's wood?

- Mixed pine and hardwood forests: 40%
- Southern yellow pine forests: 38%
- Upland hardwood forests: 17%
- Bottomland hardwood forests: 3%
- Arboricultural sources: 3%
- Sawdust, shavings, or residuals from wood manufacturing: 2%
- <1% 3%

These forest tracts were an average of 35 years old at the time of harvest.

and of that wood

- 53% was hardwood
- 47% was softwood
